

An opportunity has arisen for a QA Automation Engineer, to join PPS's dynamic and fast paced Development team, and to contribute to the on-going enhancement of their industry-leading financial transaction processing platform.

PPS uses various Java test frameworks and tools to create a fully automated test framework.

### **Job description and key responsibilities**

As a QA Automation Engineer, your role will be to:

- Develop, document, maintain and execute automated tests using Java tools to verify the quality of the PPS platform and catch issues as early as possible in the development cycle.
- Ensure high quality of the deliverables into the testing framework, take ownership and accountability for problem resolution and ensure test automation solutions are successful.
- Develop a deep understanding of the PPS products and platform to be able to analyze, specify and construct automated tests which correctly identify issues.
- Become familiar with legal and regulation aspects of the payment industry.
- Strive to continually develop and improve test methods, tools and techniques, including the test automation framework.

### **Required skills & profile**

You will have to demonstrate:

- Java automated test frameworks and tools, e.g. JUnit, Cucumber
- Test analysis skills (ideally ISTQB qualification)
- API and web services knowledge (REST)
- Degree in Computer Science or related engineering discipline or equivalent combination of education and experience
- Well organized – able to plan own work and track progress against a plan
- Methodical worker, high attention to detail and tenacious problem solver
- Strong communicator, both written & oral. Able to explain technical issues and solutions to peers.

Experience of the following is also desirable:

- Knowledge of container technologies (Docker, Swarm)
- Knowledge of CI/CD processes and the corresponding tools like Maven, Git, SVN, Jenkins
- Practical experience in Agile frameworks (Scrum) and tools (Jira)
- Java application frameworks, e.g. Spring, Hibernate
- General Linux knowledge

Vibe with us!

Joining us means:

- Taking part in an ambitious corporate project
- Becoming part of a team that embraced the digitalization challenge and enjoys this transformation every day
- Living our values every day: passions for customers, respect, imagination, simplicity, entrepreneurial spirit.

Because:

- You will be part of a global team, involved in strategic projects with exposure on international level
- Exposure to various global cultures and teams
- You will be working with the newest technologies
- We offer you a very pleasant working environment
- We also have for you: meal tickets, holiday vouchers, flexible hours, work from home, flexible benefits system, on-the-job training. And we do not stop here.
